About the Application

It is easy to get started with Customer Portal SDK - StreamOne. Every StreamOne order with a Microsoft CSP subscription works as a bucket, where you can simply change the license count to have access to more units of each product line without the need to place another order. The unit of measure for Microsoft licenses are known as "seats". This application allows you, as the customer, and your end user, to request more seats, on demand, 24/7 without the need to visit StreamOne.

The Customer Portal does not replace StreamOne but offers an alternative environment for seat modification.

As a customer, you will have access to all your end users and their Microsoft CSP subscriptions. For your end user's, all you need is to do is grant them access and decide which sales order they should have access to. Customer Portal SDK is an easy and time-saving app for making license quantity changes once the initial order has been placed. It's also a hassle-free solution that gets the job done right away.

What is Customer Portal SDK – StreamOne?

Basically, it is a management platform with two levels: Customer Portal & End User Portal. It is a web app that runs on a browser and is connected to StreamOne by APIs. It's an application that must be hosted on Azure and uses active directory login (Microsoft authentication).

How to access this application?

We believe by the time you read this document you will have completed the setup and hosting and have the site running with your customized URL. An example of this URL is:

<https://Domain.azurewebsites.net>

By default, there will be an admin user for the application, who will be responsible for granting access to other users. Users with admin rights can access the configuration page (URL shown below) and assign other users the rights to view certain reseller lists. When entering new email addresses, they should be separated by a comma (,).

Configuration Page URL: <https://Domain.azurewebsites.net/configuration>

Login Screens

When you log in you will be redirected to your site and you will be prompted to enter your credentials (Microsoft authentication).

Once complete, click on 'Accept' and you will be directed to the respective portals i.e. Customer or End User Portal.

The Customer Portal will show all the CSP licenses when you select a specific company from the list:

Before you can offer access to end users, you need to do some basic set up on the Customer Portal.

Customer Portal

On the Customer Portal, you can modify the number of licenses for Microsoft CSP products, just like if you were in StreamOne, and every seat modification will trigger a notification email.

You can also manage users and the visibility those users have of their sales orders and their products.

To add users, you should go to:

[Settings> Add App User](#)

Create a user by adding a new email to access the app and link this email to a Company Name. To control the visibility those users have of their sales orders and their products you should go to:

[Setting> Sales Order Mapping](#)

Mark or unmark a sales order to make it available or not to a specific user

Settings

The settings tab will only be visible to resellers or anyone who has admin rights.

Under Settings you will see the following options:

1. Add App User
2. Sales Order Mapping
3. Price Management

Add App User

Using this option grants the end user access. An email will be triggered as soon as a new user is added.

By clicking Add App User you will be directed to the app user management page where you can assign a company to the end user.

App User Management

This page contains the list of users that belong to a company. Various actions can be performed;

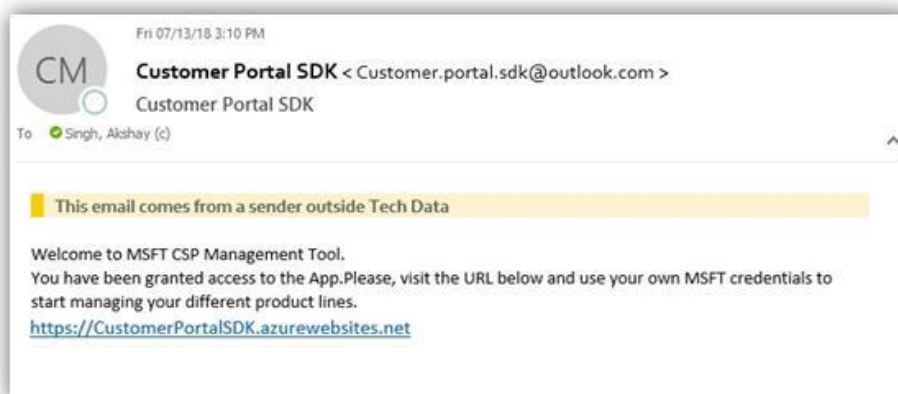

Add a user

1. Click Settings > Add App User
2. Click "Refresh" before you proceed in case you do not see a particular company listed
3. Provide the following information:
 - a. Company
 - b. Name
 - c. Email

The 'Add App User' dialog box features a blue header with a close button (X) in the top right corner. Below the header, there are three text input fields labeled 'Company', 'Name', and 'Email'. At the bottom right of the dialog, there are two buttons: a white 'Cancel' button and a blue 'Add' button.

4. An email notification will be sent to the user immediately

Delete a user

You also have the option to delete users from a company. Users with no access will not be able to see any orders when logged in.

Sales Order Mapping

Once an app user is added they should be linked to a sales order. By doing this all users that belong to the same company will have access to the sales order.

1. Click Settings > Sales Order Mapping

Sales Order Mapping : RODISDKNCETEST

RODISDKNCETEST Map All UnMap All Save Mapping

Domain	Order	Product	Type	ResellerPO	SKU	Quantity

Important: There are certain functionalities you must be aware of in this section of the application

Customer Admin

To see CSP Licenses please choose company from the dropdown list:

A table will show the below information

- **Company:** Company name
- **Domain:** Domain of the order
- **Product:** Product name
- **Type:** Microsoft Product Type
- **Cost:** Cost price of product
- **Price:** Sales price of product for the end-user
- **Quantity:** Number of seats
- **PO:** Reseller purchase order
- **SKU:** Manufacture part number
- **Status:** Product status (please hover your mouse to see the status)
- **Order:** Sales order number
- **Status:** Sales order status (please hover your mouse to see the status)
- **Commitment:** Commitment term
- **Billing Frequency:** Frequency of Billing
- **Purchased On:** Order placing date
- **Auto-Renewal:** Status of auto-renewal
- **Expiration Date:** Date of product Expiration

There is Edit icon () on the right which allows for seat modification.

Price Management

Using this option sets the following:

1. Markup
2. Seat Increase Limit
3. Tax Information

There are three scenarios for Price Management

A. For all orders of a company:

- Step 1: Select the company from the drop-down list on the price management page
- Step 2: Enter the values and click on 'Save Prices'
- Step 3: Select the 'Eye Icon' for Add-ons of particular order or domain (except for NCE Products)

Price Management : RODISDKNCETEST

Application Requirements

Minimal prerequisites to run the application on Azure are:

1. SQL database recommended: Basic tier single database (5 DTU)
2. App services pack: F1, shared tier

Application configuration

Below are the configuration page settings that are pre-installed in the application. These settings can be edited from the application configuration page.

Configuration Page URL: <https://Domain.azurewebsites.net/configuration>

App API Configuration Fields	
1. SOIN	(Provided by Tech Data)
2. Client- ID	(Provided by Tech Data)
3. Client Secret	(Provided by Tech Data)

There are a few things that you must be aware of that may become useful when using this application:

- **App URL:** The URL that will be shared in the notification email inviting the end user to visit your website
- **Allowed Reseller:** Emails of admin users. Must be separated by commas (,)
- **Reseller Name:** Customization configuration
- **Application Name:** Customization of the name on the app title and email
